A large ARTEMISIA booth will be present in the Van der Mandele room. The booth will offer three ARTEMISIA related parts: an ARTEMISIA information section, a section for pre-booking activities and a performance by one of the teams of the ARTEMIS Orchestra Concert.

The information section provides general information about ARTEMISIA, its mission & goals and the benefits of being an ARTEMISIA member.

In preparation for ARTEMISIA Call 2, that we expect in February 2009, there will be a possibility for members to organize pre-booking activities, displaying posters of ideas or videos, or present their organizations most potential consortium partners.

Next to this, teamDARE from the Netherlands, one of the teams of the ARTEMIS Orchestra Concert, will give a performance in the ARTEMISIA booth.

Each year, this contest is organized for technical students to demonstrate to the general public what embedded systems can do. The ARTEMIS Orchestra contest takes a light-hearted approach to a serious subject to attract young people for embedded systems.

INTEGRATING TECHNOLOGY FOR EUROPEAN INNOVATION
